### Percent Increase:

Start with the initial amount "a" and grow with a % increase.

$$y = a($$

## **Percent Decrease:**

Start with the initial amount "a" and decay with a % decrease.

$$y = a(y)^x$$

Identify the percent increase or decrease of each function.

1. 
$$f(x) = 0.5(1.2)^x$$

2. 
$$f(x) = 2(0.7)^x$$

3. 
$$f(x) = 4(0.025)^x$$

For each problem, create a function to model the scenario.

- 4. A home's value *V* is \$200,000 and increases by 1.5% per year *t*.
- 5. A population *p* of fruit flies is currently at 150 flies but is increasing by 205% every day *d*.
- 6. Mr. Brust's yard is getting overrun with weeds. The first year he bought his home, there was 1800 square feet of grass g. It is decreasing by 28.1% per year t.
- 7. The value *V* of a new motorcycle purchased for \$11,000 decreases by 15.7% per year *t*.

## **Half-Life:**

An initial amount  $\boldsymbol{a}$  that shrinks by half every  $\boldsymbol{h}$ .

$$f(t) =$$

## **Doubling time:**

An initial amount  $\boldsymbol{a}$  that doubles every  $\boldsymbol{d}$ .

$$f(t) =$$

#### For each problem, create a function to model the scenario.

- 8. There is 150 grams g of radioactive material. Its half-life is 4,400 years t.
- 9. Mr. Bean's parents currently have 95 descendants. The number of their descendants D doubles every 15 years t.

### **Equivalent forms**

Equivalent forms of an exponential model can reveal different properties. For example...

If t represents number of weeks, then the base of  $f(t) = (1.01)^t$  indicates that the quantity increases by a factor of 1.01 every week.

The equivalent form  $f(t) = (1.01^{52})^{(t/52)}$  indicates that the quantity increases by a factor of  $1.01^{52}$ every year.

10. If  $f(d) = 3^d$  indicates that the quantity increases by a factor of 3 every day, then what does  $f(t) = (3^7)^{(d/7)}$  indicate?

2 5 R Practice

AP Precalculus		Z.J.D Flactice
Identify the percent increase or decrease of each function.		
1. $f(n) = 0.2(1.9)^n$	$2. \ \ f(x) = 19(0.4)^x$	3. $f(n) = 5.2(3.302)^n$
$4. \ \ f(x) = 801(0.965)^x$	$5. \ \ f(x) = 58(0.8)^x$	$6. \ \ f(n) = 10(2.061)^n$
For each problem, create a function to model the scenario.		
7. Mr. Sullivan has 24 basketballs in his garage. The number of basketballs <i>b</i> increases at a rate of 37.6% per year <i>t</i> .	8. There are 1,000 fish $f$ in a pond that are dying off at a rate of 2.5% per month $m$ .	9. Plutoniu-238 has a half-life of 88 years t. A scientist is studying a 3-gram sample s.

11. Mr. Brust bought a new trailer. It | 12. A new disease is killing the local 10. A stock portfolio has a value v of cost him \$35,000. \$2,400 and doubles every 13 frog population. The half-life of Unfortunately, its value vthe population p is 2 weeks w. years t. depreciates in value by 6.5% per There are currently 6,000 frogs in year t. the swamp. 13. Mr. Kelly's house has 8 mice 14. The number of people p living in 15. A population p of fruit flies Sullyana doubles every 130 running around. Their increases by 14.34% each day d. population p increases at a years t. There is currently one There were 20 fruit flies in the 450% rate per month m. person living there. house when you left. 16. Mr. Kelly's youngest child 17. 900 grams of radioactive 18. A culture of bacteria has 500 breaks the dishes on a regular material m decays at a rate of cells c that doubles every 4 basis. If Mr. Kelly never buys 2.6% per year t. hours *h*. new dishes, then the number of dishes d he owns has a half-life of 10 months m. He currently has 60 dishes. For each of the problems below, identify how the equivalent form reveals a different property. 19. If  $f(m) = 5^m$  indicates that the quantity increases by 20. If  $f(d) = 1.2^d$  indicates that the quantity increases a factor of 5 every month, then what does f(m) =by a factor of 1.2 every day, then what does f(d) = $(5^{12})^{(m/12)}$  indicate?  $(1.2^7)^{(d/7)}$  indicate? 22. If  $f(t) = 2^t$  indicates that the quantity increases by a 21. If  $f(s) = 1.02^s$  indicates that the quantity increases by a factor of 1.02 every second, then what does factor of 2 every year, then what does f(t) = $(2^{100})^{(t/100)}$  indicate?  $f(s) = (1.02^{60})^{(s/60)}$  indicate?

# 2.5.B Exponential Function Context and Data Modeling

- 23. On June 1, a fast-growing species of algae is accidentally introduced into a lake in a city park. It starts to grow and cover the surface of the lake in such a way that the area it covers doubles every day. If it continues to grow unabated, the lake will be totally covered and the fish in the lake will suffocate. At the rate it is growing, this will happen on June 30.
  - a. Write an explicit formula for the sequence that models the percentage, p, of the surface area of the lake that is covered in algae t days after the algae was introduced. Let the initial percentage be  $P_0$ .
  - b. When will the lake be covered halfway?
  - c. On June 26, a pedestrian who walks by the lake every day warns that the lake will be completely covered soon. Her friend just laughs. Why might her friend be skeptical of the warning?
  - d. On June 29, a cleanup crew arrives at the lake and removes almost all of the algae. When they are done, only 1% of the surface is covered with algae. How well does this solve the problem of the algae in the lake?
- 24. Zebra mussels are an invasive, fingernail-sized mollusk that are infesting some of the fresh water lakes in North America. Their population increases on average at a rate of 5% per day. Let 700 be the amount of zebra mussels in a certain lake at time d = 0 days. Which of the following functions g models the amount of zebra mussels after t weeks where 700 is the amount of zebra mussels at time t = 0?

(A) 
$$g(t) = 700(1.05)^{(t/7)}$$

(B) 
$$g(t) = 700(1.05)^{7t}$$

(C) 
$$g(t) = 700(1.05^{(1/7)})^{(7t)}$$

(D) 
$$g(t) = 700(1.05^{(7)})^{(t/7)}$$

25. Inflation is affecting the cost of goods and services in an economy at a rate of 0.667% per month. Let the cost of a particular good be worth \$100 at time t = 0 years. Which of the following functions gives the value of this good t years later?

(A) 
$$a(t) = 100(1.667^{12})^t$$

(B) 
$$b(t) = 100(1 + 0.667^{(12)})^t$$

(C) 
$$c(t) = 100(1.0067^{(12)})^t$$

(D) 
$$d(t) = 100(1 + 0.00667^{(12)})^t$$
